ATM Acquiring as a Service

Optimise your ATM network
and streamline transactions

Revolutionise your ATM network management and boost operational efficiency

Our ATM acquiring service, designed for financial institutions and third-party processors, enables efficient servicing and monitoring of a diverse range of ATMs and self-service kiosks. It provides a real-time view of network operations, 24/7, and supports a broad variety of modern transaction types such as configurable withdrawals, deposits, currency conversions, balance inquiries, mini-statements, and much more.

Tailor the customer experience with our fully customisable ATM scenarios

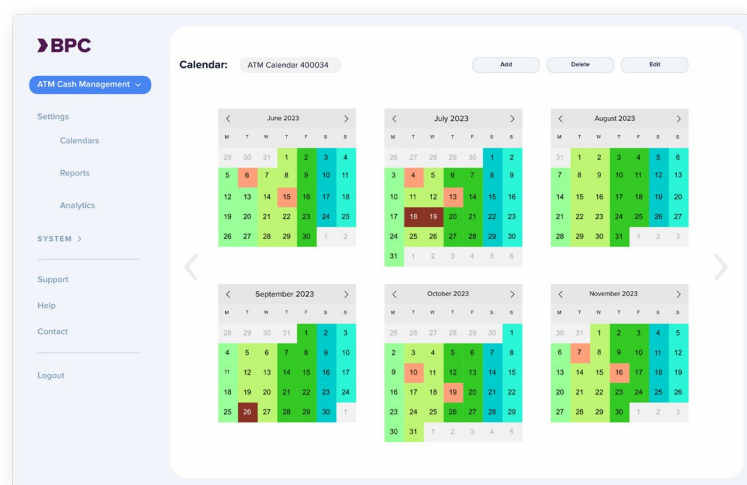

No matter how complex your organisational structure is, our ATM acquiring service is designed to match your specific needs. Configure your ATM scheme to align with your institution and agent structures, assign ATMs to different bank branches as needed, and set up banks with their own operating parameters.

How it works...

Make real-time changes to your network at your convenience. Adjust preset parameters, add new ones remotely, and synchronise information between ATM devices and your front-end. Our Remote Key Loading (RKL) functionality significantly reduces terminal deployment timeframes and minimises operational and security risks.

Don't let a non-operational terminal cost you time and money. Our solution provides immediate alerts (SMS and email) when issues are detected, delivering insights and alerts for ATMs requiring replenishment or experiencing technical difficulties.

Our ATM acquiring system provides configurable external and internal interfaces to match your unique campaigns or product launches, enhancing your speed to market for new offerings.

Key benefits of BPC's ATM Acquiring as a Service
